Repository Guide

Branches

- One branch per Product Backlog Item
- Branch out from master after pulling
    - git checkout master
    - git pull
- Format and examples:
    - git checkout -b feature/<Jira-ID>-<some-description>
    - git checkout -b feature/BP-2-back-end-boilerplate
    - git checkout -b feature/BP-6-front-end-monitor-creation

Committing

- Adding new files
    - git add *
- New feature
    - git commit -m "feat: <commit-message>"
    - git commit -m "feat: Added CSV download button"
- Bug fix
    - git commit -m "fix: <commit-message>"
    - git commit -m "fix: Resolved cross-origin issues for POST request"
- Pushing
    - git push

Merging

IMPORTANT: DO NOT MERGE YOUR BRANCH INTO MASTER, MAKE A PULL REQUEST INSTEAD

- Ready branch for pull request:
    - git fetch
    - git checkout master
    - git pull
    - git checkout <your-branch>
    - git merge master
- Resolve conflicts and commit
- Make pull request via GitHub
- Add relevant team members as reviewers
